EPIDEMIOLOGY

SOURCE OF EVENT OR ORIGIN OF INFECTION

- Swill feeding
- Illegal movement of animals
- Fomites (humans, vehicles, feed, etc.)

EPIDEMIOLOGICAL COMMENTS

Two outbreaks of African Swine Fever were detected in domestic pigs with onset between 26 and 28 June 2026 in Kitengela and the International Livestock Research Institute farm. Of a total of 194 susceptible pigs, 108 cases and 101 deaths were recorded, reflecting the characteristically high case fatality of ASF. Thirty-four animals were destroyed as part of stamping-out at the ILRI premises following the outbreak. Both affected farms operate under intensive production systems with the farm as the epidemiological unit; affected pigs were of various breeds, mixed ages and both sexes, indicating no age, breed or sex predisposition and pointing to a common source or management-related exposure such as contaminated feed, fomites or contact with infected animals.

QUANTITATIVE DATA SUMMARY

MEASURING UNIT

Animal

Species	Susceptible Cases	Deaths Killed and Disposed of	Slaughtered/ Killed for commercial use	Vaccinated
---------	-------------------	-------------------------------	--	------------

swine	NEW	36	4	1	-	-	-
(domestic)	TOTAL	230	112	102	33	0	0

DIAGNOSTIC DETAILS

CLINICAL SIGNS			METHOD OF DIAGNOSTIC				
YES			Diagnostic test				
Test name	Laboratory	Species sampled	Number of outbreaks sampled	First result date	Latest result date	Result	
Polymerase chain reaction (PCR)	Central Veterinary Laboratories Kabete	Swine	2	2026/07/03	2026/07/06	Positive	

CONTROL MEASURES
